Foreword

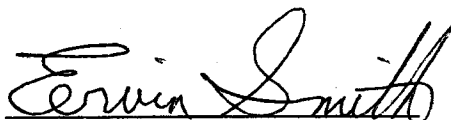

Welcome again to the amazing and wonderful world of national tournament pool checkers. Games in this edition were played and recorded during the 37th Annual National Tournament(July 7-11, 2003) at the Holiday Inn-Atlanta Airport North, 1380 Virginia Ave, Atlanta, Georgia 30344.

By studying these games, you most certainly will improve your own game. Make notes and try to determine when and why games were lost and where drawn games may have been won. Go over games with players in your area.

Games here are indexed by number and first move, and roughly by rank order of players in the division of play. APCA Tournament Divisions are as follows from highest to lowest. Top Master(TM), Master(M), Junior Master(JM), Gold Bar(GB), and Blue Ribbon(BR). The results of each game are indicated by BW for Black Wins; WW, White Wins; or D for Draw. In all games the Black side moved first. Each game is pictured after the 15th move unless a decision was reached earlier in which case the game is shown as it appeared on the last move recorded.

The end games section presents problems for you to improve your end game skills and checkers acuity. Space has been provided for you to note solutions. If you are stumped on any game or end game problem, consult a higher level player in your area, call of one our national consultants, or call or write me.

Best wishes for improved play and a higher finish in all your future tournaments.

Dr. Ervin Smith, APCA President

A 10x10 grid of 100 squares, alternating between white and black. The black squares contain numbers 1 through 10, and the white squares contain numbers 11 through 20. The numbers are arranged in a repeating pattern of 2x5 blocks.

A 10x10 grid of 100 squares, each containing a different pattern of black and white pixels, representing a 100-bit grayscale image. The patterns are arranged in a grid that is 10 squares wide and 10 squares high. Each square contains a unique, complex pattern of black and white pixels, creating a dense, textured appearance. The patterns vary significantly in their distribution and density of black pixels, ranging from mostly white to mostly black.

A 10x10 grid-in response area for a math test. The grid contains numbers 1 through 12 in various positions, some with circles around them. The grid is labeled with numbers 1 through 12 in the top row and 1 through 12 in the left column.

A 10x10 grid of 100 squares, each containing a different pattern of black and white pixels, representing a noisy image of a checkerboard.

A 10x10 grid of 100 squares, numbered 1 to 100 in a boustrophedon pattern (alternating rows from right to left and left to right). The grid is used for a drawing exercise where each square contains a different texture or pattern, and some squares contain numbers or symbols.
