

The "NOW" Checkers

by Momodou Faal

Preface

This book is a companion to the hand-written “The ‘NOW’ Checkers” book by Momodou Faal. The book is re-assembled using the modern tools, with clear diagrams and computer validated moves.

The original book had the games split into the Openings, Middle-game and End-game sections. This turned out hard to follow, jumping from one section to another, and to help the reader we joined the games back together, while identifying where the splits were in the original book.

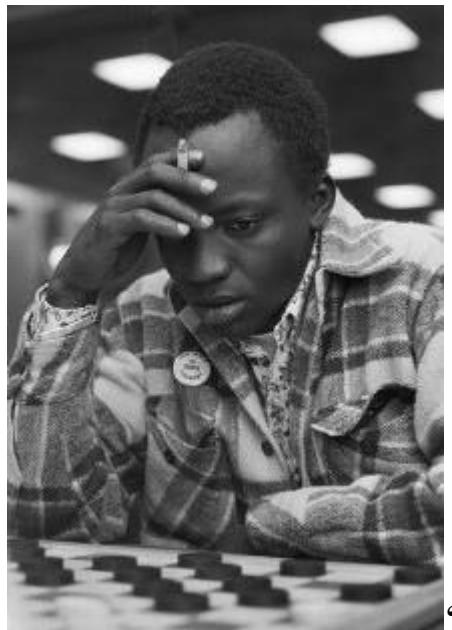

These games are also available in animation on the Pool checkers site.

Also added are some rare pictures, articles and book index.

Momodou Faal, 18 years old

Baba Sy, Senegal vs Momodou Faal, Gambia

Charles "Pecan" Thompson**"The 20 Greatest"**

September 15, 2004

He came to America in the early or mid seventies as an exchange student from Africa. It seems he got bit by the 'Pool Checkers bug,' and as a result, his studies took the hit. Although he was from Gambia, Africa, he lived in several cities in America-New York, Atlanta, New Orleans, among others, after coming to this country.

My most impressionable remembrance of Mr. Faal was in Flint, Michigan in the mid eighties. He defeated Elton Williams by the score of 3-0 in a 14 games match. In that match, we saw as good a venue for showcasing the game of American Pool Checkers as I can recall seeing anywhere. Using a large demo board and with the contestants on stage (away from the onlookers) Mr. William "Bill" Langley and myself alternated in showing the games move-for-move to the viewers who was sitting in a theater-like setting and eating popcorn in the audience. I have not seen that scenario duplicated since. And Mr. Wardell "Champ" Moore, the Flint Club's president, can be thanked for the setup.

The thing with Momodou was, he was equally as good on the 100 square board (Big Board) as he was on the 64 square board (Little Board). This was a rare combination. The 1991 Big Board Tournament in Jackson, Mississippi was another sitting in which I had a chance to watch Mr. Faal, first hand, playing the 100 square board. The tournament, I think, might have produced the greatest conglomeration of Big Board-Little Board players to have ever set foot on America soil.

Among them were many mainstays of my 20 Greatest series. There were Iser Kuperman, Vladimir Kaplan, Carl Smith, and Momodou Faal. And also, there were two players from Haiti (both names were Pierre) who were at the time living in New York. I was told, they too, played a 'mean' game on the 64 square board. While Mr. Kuperman won the tournament, Momodou finished in a tie with Vladimir Kaplan for 2nd, and Carl "Buster" Smith finished 4th-a mere two points off the pace. The two Haitians players finished 5th and 6th and I finished 7th out of a field of thirteen.

Momodou had me to thank for his 2nd place tie with Mr. Kaplan. In the very last game of the tournament, (all others had finished), I was paired with the Grandmaster Vladimir Kaplan, who needed a win to finish in an undisputed 2nd place behind Mr. Kuperman. My Friend, Mr. J. C. Wills, a top 100 square board player in his own right, who was an onlooker at the time, reminded me just recently. He said "Pecan," did Momodou ever buy you that steak dinner he promised you if you would just draw Kaplan?" My answer was, "No Mr. Wills, he never did; that is one steak dinner that I guess I will never get." You see, I did draw the Grandmaster even though I didn't even consider myself a Big Board player. I just happened to enter the tournament because it was hosted in my home city of Jackson, Mississippi and I had just won the Major's Division the previous year.

Momodou, of whom I indicated earlier had lived in several cities while in this country, was reported to have been traveling somewhere in Texas when he met his untimely death. One report was that he was heading to Houston, Texas when there was some incident with a bus (perhaps a Greyhound) that caused his fatality. The report was never made completely clear. Whatever the case, the game lost one of its greatest player ever.

For the record Mr. Faal won or tied for the APCA championship in at least 3 years. And he had multiple 2nd and 3rd place finishes in his approximate 15 years of tournament play.

July 17, 1976 The Sanford News Herald 3-Move Nat. Article

Mr. Momodou Faal came to America at the age of 18 in 1974 as an exchange student from Gambia, Africa. He learned to play Pool Checkers and became an excellent player of both the 100 square board - (Big Board) and the (Little Board) - 64 square board.

He lived in a number of cities while here as a US student, New York, Atlanta, New Orleans, and Washington, DC while attended several universities. He tried his skills in the Minor Division here in Sanford at the 1976 3-Move Nationals which he didn't do that well, but played brilliantly in the 1991 Big Board Checker Tournament in Jackson, Mississippi finishing in a tie with Vladimir Kaplan for 2nd place.

Mr. Faal was killed shortly afterwards at age 36 in a bad traffic accident while hitch-hiking to Houston that involved a couple of cars and a Greyhound bus.

The “NOW” Checkers

By Momodou Faal

Mr. Faal is a 4-Time U.S. National Champion, three times on the small board - 1979/80/81, and once on the big-board, 1983.

He is the only player that has consistently beaten Mr. Iser Kuperman, the great Russian grand-master who captured the U.S. national championship in 1984/85.

This pamphlet is a result of popular demand from checker players and enthusiasts from the U.S. and abroad.

Mr. Faal is a prodigy of Mr. Baba Sy, the late African Grand-Master and former World Champion. It is fitting and proper that this documentation is dedicated to his memory. It was Mr. Baba Sy that recommended Mr. Faal to the World Checkers Federation in 1970, and since then he's been a force to reckon with on any board.

The “NOW” Checkers

By Momodou Faal

Contents

Chapter One. Openings (Games continue in chapter 2)

Chapter Two. Middle-Games (Games continue in chapter 3)

Chapter Three. End-Games.

Chapter Four. A selection of Top Master games
I played in the 1979/80 A.P.C.A.
National Tournaments.

Format (White pieces on top with high numbers and black
pieces on the bottom with low numbers.)

Meanings - ! Star move ? Questionable move
 !! Winning move ?? Losing move

NB. All “Openings” are discussed in so far as they cover the opening moves only, and commentary is given as to the nature and strength of each particular opening.

The “Middle-Games” begin from the end of the “openings”, in other words, the first move in the middle-games section progresses from the last move in the opening section, and commentary is given as to the idea played for in each of the “middle-games”.

Finally, the “End-Games” likewise progress from the middle-games section in the same manner as the latter progressed from the “Openings”, so as to give it all a complete comprehensive whole. Game 1 in the “Openings” correspond to Game 1 in the “Middle-Games”, and also Game 1 in the “End-Games”. To study Game 1 in total, you must consult chapters 1, 2, and 3. The rest of the games, needless to say, must all be studied in the same way.

Let me add here that there is no set number of moves that constitute an “opening” or signal the beginning of the “middle-game”. This is just an arbitrary determination to facilitate the distinction between these two important stages of the game. The same is true for the “middle” and “end-games”.

Style

The approach of this book is highly unorthodox, and is quite often a radical departure from the classical (book) style of play. All the games herein are thoroughly analyzed and diagrammed so as to help facilitate the flow of information. The nature of the material presented is sometimes very advanced though certain aspects of the book can certainly help any player.

Point of interest

This book is not a substitute, but a supplement, to existing checker books, and it is in that capacity that it is written. Prior books have a lot of fine points, but some of the material in this book is, I believe, more up-to-date, and definitely more relevant to the hard-nose checker playing in the U.S. today.

NB.

Before we begin chapter one, I must emphasize not only importance of “Openings”, “Middle-Games” and “End-Games”, but how to get the most out of each of them.

Openings “Openings”, of course, are an important part of a checker players game. You cannot play a good game period unless and until your opening is sound. The quickest way to study “Openings” is through books, but the most effective way is constant practice.

There are seven possible “openings” namely

1. 9-13 2.9-14 3.10-14 4.10-15 5.11-15 6.11-16 and 7.12-16.

All of them, with the exception of 9-13 which is considered weak, should result in a draw, if played right from beginning to end. This past statement in itself highlights and emphasizes the need to “book-up” since very few players in the world can play a variant of this game from beginning to end without committing a single mistake.

Middle-Games Most players lose a lot of games during this stage of the game, mainly for two reasons: -

1. By not knowing what to do with their “middle-games”
2. By merely moving into empty squares, so to speak.

The “Middle-Game” is a fascinating part of any game, and a player who knows something about it has a tremendous edge over an opponent who does not. There are a finite numbers of “middle-games” and interestingly enough, different “openings” can develop into the same “middle-game”. Therefore, it is advisable to always try to maneuver an “opening” into a set of familiar “middle-games”.

Most players fail to realize they should be playing for “something”; and that “something” will henceforth be referred to in this section as the “IDEA”. A list of “IDEAS” is furnished at the end of this discussion to provide you with a variety of options to bare in mind, on a game-by-game basis. It is my belief that all great checker players, past and present, always play for an “IDEA” or a combination of “IDEAS”.

It is important to identify the particular problem you’re faced with, and then decide which “IDEA” or “IDEAS” to use to effectively combat or frustrate that given situation. Of course, you wouldn’t be able to deal with any situation until you know certain basics of the game – the knowledge of which is paramount to effective checker playing.

List of “IDEAS”

1. Whenever and wherever possible occupy square 14 and/or square 19. It usually is the difference between winning, drawing or losing the game.
2. While adequately defending your weak side, attack your opponent’s weak side – by weak side I mean where there are fewer checkers.
3. Always be prepared to sacrifice a checker to gain control of the board. You can sacrifice two for the king, but never sacrifice three or more checkers unless you absolutely have to.
4. Try to maintain a hitting-power at all times, it can win you games or get you out of trouble.
5. Never allow fewer checkers to tie-up or lock-up more of your checkers, but always strive to accomplish just that.
6. If you must lose a checker don’t wait until its too late., give it up early and try to gain position. Remember, position in some instances is far better than a checker.
7. Attack but never over-play or over-extend your position and/or your pieces. Aggressive playing is fine, but playing too aggressively can be disastrous.
8. Never wait for a swing.
9. Where you move or countermove ought to always reflect what your opponent is trying to do or can do.
10. Never lose the same game the same way, a different move usually changes the game into another variation.
11. Always jockey for position.

End-Games “End-Games” are the artistic touch and finesse of the greatest game on earth – checkers. They are by far the most important part of any game. It is no surprise, therefore, that most games are won or lost during this stage of the game.

A player who possesses end-game skill can make his own miracles happen. Every player should approach this part of the game with these important ideas in mind:-

1. **Caution** – Be extremely cautious of each move, whether or not you have the advantage.
2. **Analysis** – Simply stated ... there is no substitute for thorough accurate analysis. Read moves ahead.
3. **Preparedness** – Be ready to split if you realize you cannot win. Some players lose games by waiting until it's too late.

Games

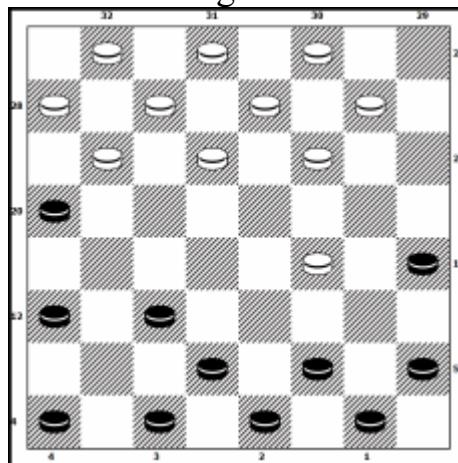

9-13 Openings

Game 1.

1.9-13 22-18!	2.11-16 18-14
3.10x17 21x14	4.16-20 25-22
5.8-11 29-25	

The 9-13 opening or the **Edinburgh group** is the weakest first move on the board since it immediately allows white to take initiative in the center. We sometimes refer to this position as the "Pole", but whatever name is attached its not recommended for black.
